Portfolio: kntim-dev.github.io/Portfolio Website | GitHub: github.com/kwabs21/Projects.git

PROFESSIONAL SUMMARY

Data Analyst with seven years of experience transforming large, complex operational datasets into actionable insights, KPI dashboards, decision-support tools, and reports used by business teams to drive daily operations. Strong expertise in SQL and Python, with a proven track record of building ETL pipelines, automating recurring reports, and conducting root cause analysis to identify and resolve operational issues. Skilled at translating complex data into clear insights for non-technical stakeholders and developing self-service dashboards that reduce ad hoc reporting demands. Brings cross-sector experience spanning mining, retail, education, and non-profit organisations, with analytics solutions that remain in active operational use, including at an active mine site.

TECHNICAL SKILLS

- **Programming and Query:** SQL, Python (Pandas, NumPy, Scikit-Learn, Matplotlib, Seaborn), Excel VBA, R (basic)
- **Business Intelligence and Visualization:** Power BI, Microsoft Excel (Pivot Tables, Power Query, Advanced Formulas, Dashboards), Matplotlib, Plotly, PowerPoint
- **Databases and Data Management:** MySQL, SQLite, Microsoft Access, ETL Pipeline Development, Data Modelling, Data Cleaning, Data Validation, Data Governance and Access Control
- **Analytics Methods:** KPI Development and Tracking, Root Cause Analysis, Regression Analysis, Statistical Modelling, Forecasting, Predictive Analytics, Data Mining, Customer Segmentation, A/B Testing, Trend and Anomaly Detection
- **Geospatial and Geographic Data:** ArcGIS, QGIS, Geographic Data Mining, Spatial Analysis
- **Statistical Software:** SPSS
- **Automation and Tooling:** Task Scheduling and Automated Reporting, Excel VBA Macros, Python Scripting, Git and GitHub, Visual Studio Code, Jupyter Notebook
- **Office and Collaboration:** Microsoft Word, Excel, Outlook, PowerPoint

PROFESSIONAL EXPERIENCE

Data Analyst and Geologist

Perseus Mining Ghana Limited, Edikan Mine, Ghana | November 2024 to Present

- Build and maintain automated Power BI and Excel VBA dashboards tracking ore movement, stockpile classification, and production KPIs in real time, improving data accuracy and reducing decision turnaround by over 30 percent.
- Maintain daily, weekly, and monthly KPI reporting used in operational business reviews by mine management and shift supervisors.
- Aggregate and reconcile data from multiple operational sources including production logs, survey records and field measurements, validating inputs before they reach management reporting.

- Run root cause analysis on operational defects such as equipment downtime, ore delivery variance, and reconciliation gaps between predicted and actual production, then present findings and recommendations to operational leadership.
- Built the Ore Tracking and Fleet Management System, a decision support tool that traces ore from excavator loading point to ROMpad stockpile in real time and surfaces truck cycle time and excavator productivity metrics, enabling management to identify and act on fleet inefficiencies.
- Developed SafeSight, a geolocation-enabled hazard reporting application adopted operationally on site and awarded 2nd Runner-Up in the company innovation programme.
- Partner with survey, engineering and safety teams to standardize data collection workflows and strengthen reporting integrity across the operation.
- Support ad hoc data requests from operational and planning teams, turning unstructured questions into repeatable reporting where a pattern emerges.

Lead Data Consultant

Platilume Data, Accra, Ghana | 2018 to Present, formally established August 2026

- Lead a data and business solutions practice delivering data collection and management, business intelligence, custom dashboards, and operational cost optimization for SME and corporate clients.
- Delivered analytics engagements for clients including Yadan SM, Tilitet Early Childhood Care and Development Centre, Yoliana Services, TonyCee Mining, Iconic Bracelets and NY Essentials.
- Designed dynamic Power BI sales and operations dashboards for retail clients tracking inventory levels, sales performance, and promotional campaign effectiveness.
- Built seasonal demand forecasting models and automated data workflows in Python and Excel VBA, cutting report generation time by over 40 percent during peak operational periods.
- Implemented ETL pipelines consolidating data from multiple retail source systems into unified datasets for management decision-making.
- Automated attendance tracking and performance reporting for an education client, saving over 5 administrative hours weekly and improving record accuracy.
- Managed donor and membership databases for a non-profit client, building custom VBA tools and Power BI dashboards to support leadership planning.
- Facilitated hands-on Python and Excel VBA training workshops for working professionals, improving their ability to handle and report on operational data.

Data Analytics Consultant

TonyCee Mining Services, at GoldFields Damang Mine, Damang, Ghana | October 2023 to June 2024

- Conducted operational appraisals using structured data analysis, identifying process inefficiencies that contributed to a 17 percent reduction in project costs.
- Analyzed geotechnical datasets to model ground conditions, slope stability, and site logistics, translating results into rehabilitation recommendations.
- Produced visualization-rich technical reports supporting stakeholder decision-making and regulatory compliance.

Project Supervisor and Data Analyst

Yoliana Services, at GoldFields Damang Mine, Damang, Ghana | October 2022 to December 2022

- Monitored KPIs and performance metrics across multiple concurrent infrastructure projects to ensure on-time delivery within quality and safety standards.
- Analyzed project scheduling data and resource utilization patterns to streamline workflows and reduce delays.
- Delivered a 20 percent reduction in operational costs through structured budgeting analysis and data-backed resource allocation.
- Established clear data reporting structures between field teams and management, improving issue resolution speed.

Sales Data Analyst and Manager

Lebencon Company Limited, Accra, Ghana | August 2020 to August 2021

- Built real-time Power BI and Excel dashboards tracking sales activity, pipeline performance, and team KPIs, improving visibility and accountability across the sales function.
- Developed data-informed sales plans that exceeded annual revenue targets by over 15 percent.
- Applied regression analysis and trend modelling to improve sales forecasting accuracy for management planning.
- Used customer segmentation analysis to identify high-value client groups and sharpen promotional targeting.

Geological Data Analyst (National Service)

AngloGold Ashanti, Iduapriem Mine, Tarkwa, Ghana | September 2019 to August 2020

- Collected, cleaned, and interpreted large drilling datasets supporting geological modelling, ore block definition, and mine planning workflows.
- Built and maintained geological databases, improving data accessibility and reliability for senior geologists, planners and operational teams.
- Analyzed drill and sampling data to support grade control, contributing directly to production accuracy and dilution management.
- Generated operational performance reports and environmental compliance monitoring summaries for management and regulatory reporting.

Junior Geoscience Analyst (Internship)

AngloGold Ashanti, Sankofa Gold, Prestea, Ghana | July 2017 to September 2018

- Collected and recorded structured field and sampling data across active open-pit operations.
- Performed quantitative laboratory analyses and produced technical data reports for engineering use.
- Prepared structured technical reports and operational documentation to a consistent standard.

SELECTED PROJECTS

Ore Tracking and Fleet Management System

- Tools: Excel VBA, data modelling, KPI dashboard design.
- Problem: ore movement from pit to ROMpad had no unified tracking, making fleet utilization impossible to monitor or optimise.

- Built an integrated platform tracing ore in real time from excavator loading point to stockpile, with dashboards covering truck cycle times and excavator productivity.
- Outcome: enabled management to identify and reduce idle equipment time and improved ore delivery accuracy to the crusher. In operational use on site.

SafeSight: Real-Time Safety Hazard Reporting Application

- Tools: mobile-first web application, Back4App (Parse) backend, GPS geolocation capture, Base64 media storage, hosted report viewer.
- Problem: no fast, structured, location-aware method existed for logging site hazards, causing slow response and poor incident documentation.
- Built a mobile-friendly application allowing field personnel to log hazards with GPS coordinates and photo or video evidence, routed through a supervisor email workflow with instant visibility for safety management.
- Outcome: awarded 2nd Runner-Up in the Perseus Mining Edikan innovation programme and adopted operationally for active hazard management.

Equipment Performance Analysis, NKS Pit

- Tools: Excel, advanced formulas, statistical summaries, dashboard visualization.
- Built an analytical workbook covering excavator and haul truck availability, utilization and downtime categorization, with visualizations designed to isolate the largest contributors to lost productive time.
- Outcome: provided a repeatable framework for identifying and ranking equipment performance losses.

Acts of God: Automated Weather Alert and Response System

- Tools: Python, live weather API integration, threshold logic, scheduled automation.
- Problem: field teams had no automated monitoring of weather conditions, forcing reactive responses to rain and storms.
- Built a system that continuously queries live weather feeds, evaluates conditions against operational thresholds with shift-aligned time logic, and triggers categorized alerts to field and management teams.
- Outcome: improved team preparedness and reduced weather-related production stoppages.

Facial Recognition Attendance and Workforce Management System

- Tools: Python, OpenCV, Pandas, SQLite.
- Built an automated system identifying staff at check-in points, logging attendance to a SQLite database and generating automated workforce reports.
- Outcome: eliminated manual attendance errors, cut administrative processing time by over 5 hours weekly, and enabled data-driven shift planning.

Sample Ticket Generation and QA/QC Automation Tool

- Tools: Excel VBA.
- Built an automated tool generating structured sample tickets with standardized Sample ID, QA/QC sample type (standard, blank, field duplicate), and category fields, enforcing consistent QA/QC insertion across drilling output and removing a manual, error-prone step from the data chain.

EDUCATION

BSc. Geological Engineering, Second Class Upper Division

Kwame Nkrumah University of Science and Technology (KNUST), Ghana | 2015 to 2019

Quantitative coursework: Engineering Statistics, Mineral Resource Estimation, GIS and Remote Sensing, Project Management.

WASSCE, General Science. St. Augustine's College, Ghana | 2012 to 2015

CERTIFICATIONS AND PROFESSIONAL DEVELOPMENT

- Data Analytics Certificate, Bond University
- Power BI Certificate
- Microsoft Excel: VBA and Macros, Data Visualization, Charts and Graphs
- QGIS Certificate, Central University of Karnataka and State Institute of Urban Development, India
- ISO 45001: Occupational Health and Safety Management System
- Member, Ghana Institution of Geoscientists (GhIG)
